

Welcome to MASS News Feed

You must be wondering what MASS stands for? Well, MASS is the abbreviated form of the names of the members of this group. MA from Mahin(the mastermind behind the project) and SS for Shijon and Sayeem.

The NEWS FEED allows users to login with username and password which are validated by the server. This user authentication is done by registering an user in the mysql database after which we hash the password. The user's data is checked against that entry when the user tries to login. The user will be able to upload pictures which are implemented using NODE JS and multer on the backend.

Additionally, the user will be able to post captions and will have the option to VOTE only ONCE. The user can also check when the image was posted. We made sure that the user can check the number of votes on a picture.

The purpose of this project is to create a community where people will be able to share pictures of nature, travel, cooking etc. and get reactions from people. Given how photography is gaining popularity with every passing day, this project will hopefully be the talk of the town to the community.

Furthermore, this project allowed us to put into use what we learnt so far in our courses and beyond and at the same time gave us an experience of what it is like to build a real life project.
